

New Refineries Under construction

Goureh –Jask Crude Oil Pipeline Project

Construction of a crude oil pipeline from Goureh oil terminal to the east of Jask with the capacity of 1,000,000 bpd to attain the following objectives:

- Reducing reliance on one water way channels and increasing the reliability of crude oil exports
- Reducing the distance of export markets and in a nut shell increasing the competition in export markets

Jask Oil Storage Terminal Project

Oil storage terminal with the capacity of 20,000,000 bpd of crude oil in Jask port, planned to be constructed to attain the following objectives:

- Increasing the storage capacity of crude oil
- Use the appropriate sales opportunities and the current price
- Reducing the maintenance costs at special conditions
- providing more reliable attraction for customers
- The terminal will be built by the private sector and its costs secured by the income from leasing the storage tanks

Shiraz Pars Farayand Refinery project

Construction of a new condensate refinery with the capacity of 120,000 bpd with the objectives:

- Maximizing the production of gasoline and gas oil
- Observing the environmental obligations
- Improving the quality of petroleum products to meet Euro-V emission standards
- This project will be considered as downstream chain of the various phases of the South Pars

Project Description:

- Implementation of a Pars condensate refinery with the capacity of 120,000 bpd
- Implementation of condensate pipeline from Assalouyeh to Shiraz
- Installation of related projects, including utility and offsite units

Investment: \$ 1.8 billion

Products	
product	Production Rate (million lit/d)
LPG	1.2
Gasoline	12.7
Kerosene	2.5
Gas Oil	6.6
Sulphur	(t/d) 62
Capacity: 120,000 bpd	

National Iranian Oil Refining & Distribution Company (NIORDC)

Anahita Refinery construction project

This project will be implemented to meet the following objectives:

- Supplying petroleum products for Kermanshah province and west of Iran
- Exporting part of petroleum products to neighboring countries
- Supplying feedstock for petrochemical and other downstream industries
- Replacement of existing Kermanshah refinery
- Technological development of Kermanshah province
- Utilizing the private sector investment in developing the project
- Production of petroleum product (LPG, Gasoline, Kerosene, Jet fuel, Gas oil, Bitumen) according to Euro-V emission standards by the implementation of required processing units
- Production of fuel oil according to the current standards of Iran in order to supply the region

Observing the environmental standards and considerations

Location: Kermanshah province

Capacity: 150,000 bpd

Investment: \$3.4 billion

Products	
product	Production Rate (million lit/d)
LPG	0.6
Regular Gasoline (RON 90)	5.2
Premium Gasoline (RON 95)	1.3
Kerosene	5
Gas Oil	8.5
Fuel Oil	3.6
Bitumen	(t/d) 840
Capacity: 150,000 bpd

National Iranian Petrochemical Company

Iran ... one of the oldest cradles of civilization ... a shining gemstone at the heart of the ancient continent, Asia, ... a nation proud of a rich cultural heritage of 7000 years old, a telltale of history, science, literature and human rights as declared in the Cyrus Cylinder, man's first human rights charter, which dates back to the 6th century before common era. Covering an area of over 1.6 million square meters, located in the south west of Asia. Architecture of Iran, with numerous fascinating historical buildings and monuments, deserved to be listed as World Heritage Sites, depicts a history of genuine culture and customs built upon kindness and respect for others and compassion. Iran is the land of literary masterpieces with great poets like Hafez, Sa'di, Ferdowsi, Attar, Khayam and Rumi to name only a few. It's the standard-bearer of the development of natural sciences including chemistry and medicine with pioneering work and findings by scientists like Avicenna, Razi and Abu Rayhan, whose works, written several centuries ago, have been translated into many different languages and became the beacon for other scientists for generations to come. Iran, the land of four seasons and unique products like saffron, pistachio and the most beautiful carpets, lies on the path of the ancient Silk Road. Today, the "strategic situation" and "abundant hydrocarbon resources" are the

two important factors in attempts to revive the Silk Road. Therefore, studying the role and situation of Iran is considered to be very remarkable, not only by policy-makers and macro-planners of the country, but by regional and international statesmen and economists as well. Iran possesses abundant natural resources, including iron, aluminum, oil, gas and many others which offer ample investment opportunities in different industries. These huge oil and gas resources, which are readily available and cost-effective, have paved the grounds for the expansion of petrochemical industry in Iran.

National Petrochemical Company

National Petrochemical Company of Iran, as one of the four main deputies in the Oil Ministry, is responsible for strategic management and macro planning, policy making, coordinating and supporting sustainable development of the country's petrochemical industry. Relying on more than half a century of experience, the company would support and patronize all projects and petrochemical plants across Iran ranging from upstream to downstream industries. By creating dynamic business environment to all local and foreign investors, the company encourages all domestic and foreign investors to choose Iran as their final destination of investment, a country which is into the job of developing petrochemicals production chain. Iran ranks second largest producer of petrochemical products in the region with annual production installed capacity of 60.6 million tons of petrochemical products by the end of 2015. With 157.8 billion barrels of proven oil reserves (ranking fourth in the world's oil reserves) and total proven natural gas reserves of approximately 34 trillion cubic meters (ranking number one as holder of natural gas reserves in the world) by the end of 2015, Iran is estimated to be the most stable supplier of feeds to the petrochemical industries across the country and in the World. Also due to other factors affecting risks and investment return, including security investments, quick jump in the development, easy access to high seas, a huge market of growing domestic consumption, educated young population and engineering companies, quality contractors and manufacturers, Iran turns to be a major hub for investment in the petrochemical industry across the region.

Investment Directorate

Investment Directorate, as one of the main National Petrochemical Company Directorates, is highly structured with macro objectives in investment, partnership and finance of developing projects.

In this respect, identifying, developing and introducing investment opportunities and trusting projects to reliable, authorized investors and facilitating investment in the shortest possible time are among the main objectives of this Directorate. Steering internal and external strategic partnerships through technical and economic evaluation of investors,

supporting various processes to absorb investment, supporting current investment funds and creating new investment funds with respect to the targets of the National Petrochemical Company's objectives are among other tasks of the Investment Directorate. Cooperating with other Directorates of the National Petrochemical Company, Investment Directorate is to develop its list of authorized investors. Using its legal mandate and also is to provide an appropriate environment for domestic and foreign investors in Iran's petrochemical industry.

The advantages of investing in Iran's petrochemical industry

- availability of continuous and accessible feeds
 - Receiving support of the National Petrochemical Company for developing petrochemical industries
 - Stabilization of feeds prices during the operation based on formulas approved
 - Discounts defined up to %30 of feedstock to establish plants in least developed areas including downstream chains
 - Long-term tax exemptions from operating time in free-trade zones, special economic areas and least developed regions
 - Access to experts and professionals
 - Access to high seas
 - Access to import / export facilities
 - Access to growing domestic market
 - Existence of developed infrastructures (airport, railway, port, jetty, etc.) in petrochemical hubs
 - Access to qualified engineering companies, suppliers and manufacturers
 - Iran's Foreign Investment Promotion and Protection Act (FIPPA - page 14)
- **Advantages and customs exemptions in Free trade and special economic zones:**
 - Export goods without any formalities
 - Import goods at the lowest customs formalities
 - Export of imported goods in other zones without any formalities
 - Allocate land to qualified applicants after evaluation
 - Ensure foreign investment based on free zones law
 - Guaranteed return of capital and profits acquired
 - Tax breaks for imports of all goods and materials such as equipment and buildings materials
 - No requirement to get visa to enter the free trade zones
 - Issuance of residence permits for foreign nationals without legal formalities in free trade zones
 - Production machinery and equipment exemption from payment of customs duties (first-hand machinery)
 - Refund of customs duty paid for importing raw materials in the production of export goods
 - Exemption from payment of tariffs for the transportation of semi-finished goods into the country

Iran's Foreign Investment Promotion and Protection Act (FIPPA)

- **Characteristics and legal facilities**
 - No restrictions on the volume and percentage of foreign investment share
 - Possibility of registering an Iranian company with %100 foreign capital
 - The transfer of capital, profits and gains derived from the use of capital in the form of currency or goods
 - Equal treatment to foreign and domestic investors
 - Possibility of investing in all areas allowed for private sector

National Iranian Petrochemical Company

- Granting protection coverage to all forms of foreign investment
- Short and quick admission application and approval process for foreign investment
- Three-year residence permit for investors, managers, foreign experts and their relatives of the first degree

• Risks covered by law

- Expropriation or nationalization
- The transfer of capital and profits from it indefinitely
- Guaranteed purchase of goods and services produced in foreign investment projects in the BOT method if their exclusive purchaser is the Government.

Investment opportunities

Iran, due to specific geographical conditions and the huge hydrocarbon reserves, has created a unique opportunity in the region. Investment opportunities in Iran's petrochemical industry, are a wealth and capital at the disposal of those investors, whose technical and economic competence are confirmed, according to a description provided in the annex, to enable them to maximum use of this opportunity. Investment opportunities in Iran's petrochemical industry are introduced through following conditions:

1-The projects defined by National Petrochemical Company (Table No. 1)

These projects are defined by Planning and development Directorate of National Petrochemical Company after studying the market and targeting suitable investment elements. After obtaining approval from the board of directors, by the Investment Directorate through public calls, these projects will be entrusted to those investors whose technical and economic competence is confirmed.

2- Participation in ongoing projects (Table No. 2&3)

Participation in projects that are already achieving development goals for the National Petrochemical Company and have started, according to schedule, to save time. Projects which are prepared to absorb participation of investors whose financial and professional capabilities are confirmed by the NPC.

3- Projects introduced by investors

Investor can do the feasibility study and prepare a business plan and propose it as a new idea to the Investment Directorate. Investment Directorate, in cooperation with other National Petrochemical Company Directorates, studies the offered idea, evaluates documents related to the technical and economic capabilities of the investor, and gains the approval of board of directors at the National Petrochemical Company before the projects are entrusted to the investor.

Iran geography is ready to develop the petrochemical industry

The existing hub for the petrochemical industry

- Mahshahr
- Assaluyeh

Other areas

- Central Ethylene Pipeline
- The ongoing projects within the country
- West Ethylene Pipeline
- Complexes under operation in the country

The future hub for the petrochemical industry

- Chabahar
- Parsian
- Qeshm
- Jask
- Lavan
- Iranshahr
- Mahshahr development
- Assaluyeh development

Approval process and entrust of petrochemical projects to investors

Receiving documents and application

- A copy of the original document of the company constitution
- A copy of the original: From first and last official newspapers displaying company changes
- A copy of the original: From registration documents, including registration certificate, national ID and economic code
- 2 recent years financial statements approved by the regulators or audit organization
- Applicants, executive background in the past two years and any activities related to the requested projects
- Preliminary Business Plan or prefeasibility Study (PFS)

Assessment of project and approval of investment qualification

- Verification of the applicant company's legal capacity and ...
- Evaluation of Preliminary Business Plan or PFS of projects
- Feeds availability
- Evidence of financial capability
- Evidence of technical and administrative capabilities of the applicant company
- Correspondence with the relevant ministries and agencies

Inquiring the opinion or approval of the Board of Directors at the National Petrochemical Company

- Evaluating the project and obtaining the necessary approvals necessary correspondence with other entities including the Ministry of petroleum, Ministry of Industry, Mine and Trade
- Bringing up the project at the Board of Directors and obtaining the necessary approvals
- Issuing primary agreement of the project after approval of Deputy of planning of ministry of petroleum

Investor activities after obtaining the primary agreement (within the 1st year)

- Providing final business plan
- Providing land lease or purchase document with the approval of the Governor and other relevant organizations
- Providing official confirmation

National Iranian Petrochemical Company

by the Environment Protection Organization Obtaining necessary permits (for feeds, water, electricity, fuel, etc.) from the concerned organizations • Obtaining necessary permits from the Ministry of Industry, Mine and Trade • Determining owner of the certificate, operating contractors and consultants of the project such as EPC operating contract or any other operation strategy • providing financing package of the project

Liaison of investment Access to information

Questions and requests for information should be directed through the National Petrochemical Company, Investment Directorate. If you have any questions or need more information, do not hesitate to contact the Investment Directorate via email: Investment@nipc.ir. All information sent by the applicants will be properly protected by National Petrochemical Company.

The first part of the document discusses the importance of maintaining accurate records of all transactions. It emphasizes that every entry, no matter how small, should be recorded to ensure the integrity of the financial data. This includes not only sales and purchases but also expenses, income, and any other financial activities.

The second part of the document provides a detailed breakdown of the accounting process. It starts with the identification of the accounting period, followed by the collection and classification of data. The next steps involve the recording of transactions in the journal, the posting of these transactions to the ledger, and the preparation of financial statements.

The third part of the document focuses on the analysis and interpretation of the financial statements. It explains how to use the balance sheet, income statement, and cash flow statement to assess the financial health of the organization. It also discusses the importance of comparing the current period's performance with the previous period and with industry benchmarks.

The final part of the document concludes with a summary of the key points discussed. It reiterates the importance of accuracy, consistency, and transparency in the accounting process. It also provides some final thoughts on the role of accounting in the overall management of the organization.
